

PREP DISCOVERY TIME

TERM 4 2026

During Discovery Time sessions, students will continue developing their social skills through a range of play-based activities. They will have opportunities to practise literacy, numeracy, role-play and fine motor skills while learning to share, take turns, work together and solve problems with others.

Students will continue to explore different emotions and develop a greater understanding of their own feelings and the feelings of others. They will learn ways to communicate their needs, listen to others and build positive relationships.

Through a variety of activities, students will develop their confidence and ability to work as part of a team. Students will also have opportunities to observe their peers and reflect on how they are working and playing together.

They will share their observations with the class and discuss ways we can be kind, respectful, helpful and supportive towards others.

Students will take part in gardening activities, providing further opportunities to develop their social skills while connecting with nature. They will explore their senses, observe changes in the natural environment and learn about the basic needs of living things.

Students will plant and care for a variety of seeds and plants, learning how to water them, provide sunlight and care for them as they grow. These experiences will encourage students to work together, take responsibility and develop a sense of care for their environment.

Teacher: Jenny Farrelly
